FCC Parts 2, 22, 24  
Equipment: Sonim XP3.20-A Quest / Land  
Rover S1-A by Sonim

REPORT NO.: I09GE4084-FCC-EMC

**FCC ID:** WYPP23C001AA

**Report Date:** 2009-3-30

**Test Firm Name:** China Telecommunication Technology Labs

**Registration Number:** 840587

#### Statement

The measurements shown in this report were made in accordance with the procedures described on test pages. All reported tests were carried out on a sample equipment to demonstrate limited compliance with FCC CFR 47 Parts 2, 22, and 24. The sample tested was found to comply with the requirements defined in the applied rules.

## 1 General Information

### 1.1 Notes

All reported tests were carried out on a sample equipment to demonstrate limited compliance with FCC CFR 47 Parts 2, 22 and 24.

The test results of this test report relate exclusively to the item(s) tested as specified in section 2.

The following deviation from, additions to, or exclusions from the test specifications have been made. See Annex C.

China Telecommunication Technology Labs.(CTTL) authorizes the applicant or manufacturer (see section 1.4) to reproduce this report provided, and the test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of CTTL Mr. He Guili.

Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of such third parties. CTTL accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

## 1.3 Testing Laboratory information

### 1.3.1 Location

Name: China Telecommunication Technology Labs.  
Address: No. 11, Yue Tan Nan Jie, Xi Cheng District  
BEIJING  
P. R. CHINA, 100083  
Tel: +86 10 68094053  
Fax: +86 10 68011404  
Email: [emc@chinattl.com](mailto:emc@chinattl.com)

### 1.3.2 Details of accreditation status

Accredited by: China National Accreditation Service for Conformity  
Assessment (CNAS)  
Registration number: CNAS Registration No. CNAS L0570  
Standard: ISO/IEC 17025:2005

### 1.3.3 Test location, where different from section 1.3.1

Name: -----  
Street: -----  
City: -----  
Country: -----  
Telephone: -----  
Fax: -----  
Postcode: -----

## 1.4 Details of applicant or manufacturer

### 1.4.1 Applicant

Name: SONIM TECHNOLOGIES INC.  
Address: 1875 S.GRANT STREET  
SAN MATEO, CA 94402, USA  
Country: USA  
Telephone: +1 650 704 4926  
Fax: +1 650 378 8109  
Contact: JASEN KOLEV  
Telephone: +1 650 704 4926  
Email: jasen@sonimtech.com

### 1.4.2 Manufacturer (if different from applicant in section 1.4.1)

Name: SONIM TECHNOLOGIES INC.  
Address: 1875 S.GRANT STREET  
SAN MATEO, CA 94402, USA

### 1.4.3 Manufactory (if different from applicant in section 1.4.1)

Name: Flextonics Industrial (Zhuhai)  
Address: Xin Qing Science & Technology Industrial Park, Jing An  
Town, DouMen, ZhuHai City, GuangDong, P.R. China,  
Zip Code: 519180

FCC Parts 2, 22, 24  
Equipment: Sonim XP3.20-A Quest / Land  
Rover S1-A by Sonim

REPORT NO.: I09GE4084-FCC-EMC

## 2 Test Item

### 2.1 General Information

Manufacturer: SONIM TECHNOLOGIES INC.  
Name: Mobile Phone  
Model Number: Sonim XP3.20-A Quest / Land Rover S1-A by Sonim  
Type Number: P23C001AA  
Serial Number: --  
Production Status: Product  
Receipt date of test item: 2008-01-13

### 2.2 Outline of EUT

E.U.T. is a GSM 850 and 1900 band Mobile phone supporting GSM GPRS and EGPRS.

### 2.3 Modifications Incorporated in EUT

The EUT has not been modified from what is described by the brand name and unique type identification stated above.

### 2.4 Equipment Configuration

Equipment configuration list:

| Item | Generic Description | Manufacturer            | Type  | Serial No. | Remarks |
|------|---------------------|-------------------------|---|------------|---------|
| A    | handset             | SONIM TECHNOLOGIES INC. | Sonim XP3.20-A<br>Quest / Land Rover<br>S1-A by Sonim | --         | None    |
| B    | adapter             | SONIM TECHNOLOGIES INC. | DSA-0051-05C FUS<br>51055F                            | --         | None    |
| C    | battery             | SONIM TECHNOLOGIES INC. | XP3.20-0001100  | --         | None    |
| D    | Earphone            | SONIM TECHNOLOGIES INC. | ME-848B14   | --         | None    |

Cables:

| Item | Cable Type          | Manufacturer | Length | Shield | Quantity | Remarks |
|------|---------------------|--------------|--------|--------|----------|---------|
| 1    | DC cable on Adapter | Unknown      | 1.0 m  | No     | 1        | None    |

FCC Parts 2, 22, 24  
Equipment: Sonim XP3.20-A Quest / Land  
Rover S1-A by Sonim

REPORT NO.: I09GE4084-FCC-EMC

## 2.5 Other Information

(a) Modulation is GMSK.

(b) Emission Designator is 285KGXW.

(c) Version of hardware and software

HW Version: A

SW Version: 05.0.0-18.2-2

(d) Adaptor information:

Input: 100-240VAC 50/60Hz 0.2A

Output: 5.1VDC 0.55A

(e) Battery information:

3.7VDC 1850mAh

### 3 Summary of Test Results

A brief summary of the tests carried out is shown as following.

| 111835               | Wireless Communications Test Set   | R&S          | CMU200           | 1100000802    | --         | Normal |

#### Limit Level Construction:

According to Part 24.238 (a), i.e., Out of band emissions. The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least  $43 + 10 \log(P)$  dB, so the limit level is:  
 $P(\text{dBm}) - (43 + 10 \log(P)) \text{ dB} = -13\text{dBm}$

#### Limits for Radiated spurious emissions(UE)

| Frequency range     | Limit Level /Resolution Bandwidth |
|---------------------|-----------------------------------|
| 30 MHz to 20000 MHz | -13dBm/1MHz                       |

#### Test Setup:

The EUT was placed in an anechoic chamber, see figure SP. The Wireless Communications Test Set was used to set the TX channel and power level and modulate the TX signal with different bit patterns. The test was done using an automated test system, where all test equipments were controlled by a computer.

Figure SP

**Test Method:**

The measurement was performed accordance with section 2.2.12 of ANSI/TIA-603-B-2002: *Land Mobile FM or PM Communications Equipment Measurement and Performance Standards*.

- 1 The maximum spurious emissions were searched by turning the azimuth of the turntable, shifting the polarization of the measuring antenna and changing the pose of the EUT.
- 2 Levels of EUT's transmitter harmonics and suspicious signals were recorded.
- 3 The recorded levels were corrected in the automated test system with the correction factors given by a substitution calibration made before the measurement. The calibration was made separately for vertical and horizontal polarization and the system uses different correction factors depending on the measuring antenna polarization.
- 4 The corrected values of radiated spurious emissions indicated as EIRP are reported.

**Note:**

- 1 The investigated ARFCNs are 190 (836.6 MHz) and 661 (1880.0 MHz).
- 2 The investigated frequency range is 30 MHz ~ 18 GHz.

### Limit Level Construction:

#### (a) Radiated RF Power Output

According to Part 24.232(b), i.e., Mobile/portable stations are limited to 2 watts EIRP peak power and the equipment must employ means to limit the power to the minimum necessary for successful communications, so the limit level is 2 W or 33 dBm.

#### (b) ERP

According to Part 22.913(a), the ERP of mobile transmitters and auxiliary test transmitters must not exceed 7 Watts.

### Limits for Radiated RF Power Output

| Frequency range | Limit Level (EIRP)/Resolution Bandwidth |
|-----------------|---|
| TX channel      | 33dBm/1MHz                              |

### Limits for ERP

| Frequency range | Limit Level (ERP) |
|-----------------|-------------------|
| TX channel      | 7W                |

## Test Setup:

The EUT was set in an anechoic chamber, which is connected to the Wireless Communications Test Set located outside the chamber over the air. The test was done using an automated test system, where all test equipments were controlled by a computer.

## Test Method

The measurement was performed accordance with section 2.2.17 of ANSI/TIA-603-B-2002: *Land Mobile FM or PM Communications Equipment Measurement and Performance Standards*.

1 The maximum power was searched by turning the azimuth of the turntable, shifting the polarization of the measuring antenna and changing the pose of the EUT.

2 The measured levels are EIRP values corrected in the automated test system with the correction factors given by a substitution calibration made before the measurement. The calibration is made separately for vertical and horizontal polarization and the system uses different correction factors depending on the measuring antenna polarization.

3 The corrected maximum levels were reported for EIRP values, and ERP values can be calculated from EIRP values.

Note:

None.

EIRP Value for GSM mode:

| ARFCN | Frequency<br>[MHz] | EIRP<br>[dBm] |
|-------|--------------------|---------------|
| 128   | 824.228457         | 27.79         |

### Test Setup

The situation under which maximum EIRP values were found in the measurement of the radiated RF power output was used to determine the 99% occupied bandwidth. The Wireless Communications Test Set was used to set the TX channel, power level and modulation.

### Test Method

The 99% occupied bandwidth was calculated from the spectrum analyzer. Markers in the spectrum analyzer were then placed between the calculated frequencies to show the calculated 99% power band.

#### Test Setup

The EUT was placed in a temperature chamber, demonstrated as figure T. The wireless communications test set (test simulator) was used to set the TX channel and power levels, modulate the TX signal with different bit patterns and measure the frequency of TX.

Figure T: setup for measurement of frequency stability over temperature variation

## Test Method

1. The EUT was turned off and placed in the temperature chamber.
2. The temperature of the chamber was set to -30°C and allowed to stabilize.
3. The EUT temperature was allowed to stabilize for 45 minutes.
4. The EUT was turned on and set to transmit with 8960.
5. The maximum transmit frequency deviation during one minute period was measured by Wireless Communications Test Set.
6. The steps 3-5 were repeated for -20°C, -10°C, 0°C, 10°C, 20°C, 30°C, 40°C and 50°C.

## Test results data for GSM mode:

#### Test Setup

The EUT was placed in a shielding chamber and powered by the dummy battery which is connected to a DC power source, demonstrated as figure V. The wireless communications test set was used to set the TX channel and power level, modulate the TX signal with different bit patterns and measure the frequency of TX.

Figure V: test setup for measurement of frequency stability over voltage variation

## Test Results data for GSM mode:

Channel 190: Compliance windows: 2091.5Hz

| Level         | Voltage[V] | Deviation[Hz] | Remarks |
|---------------|------------|---------------|---------|

#### Test Setup:

During the process of testing, the EUT was controlled via the Wireless Communications Test Set to ensure max power transmission and proper modulation and measured by Rhode & Schwarz EMI test receiver (ESI26).

## Test Method

- 1) The EUT was coupled to the EMI test receiver analyzer mode and the base station simulator through a power divider. The radio frequency load attached to the EUT antenna terminal was 50 Ohm. The loss of the cables the test system is calibrated to correct the readings.
- 2) The spectrum analyzer was set to Maxpeak Detector function and Maximum hold mode.
- 3) The resolution bandwidth of the spectrum analyzer was comparable to the emission bandwidth.

Note: --

## Test Results for GSM mode:

| ARFCN | Peak output power [dBm] |
|-------|-------------------------|
| 128   | 32.60                   |
| 190   | 32.49                   |
| 251   | 32.73                   |
| 512   | 29.99                   |
| 661   | 28.99                   |
| 810   | 28.89                   |

## Test Results for GPRS mode:

| ARFCN | Peak output power<br>[dBm] |
|-------|----------------------------|
| 128   | 32.44                      |
| 190   | 32.36                      |
| 251   | 32.57                      |

#### Limit Level Construction:

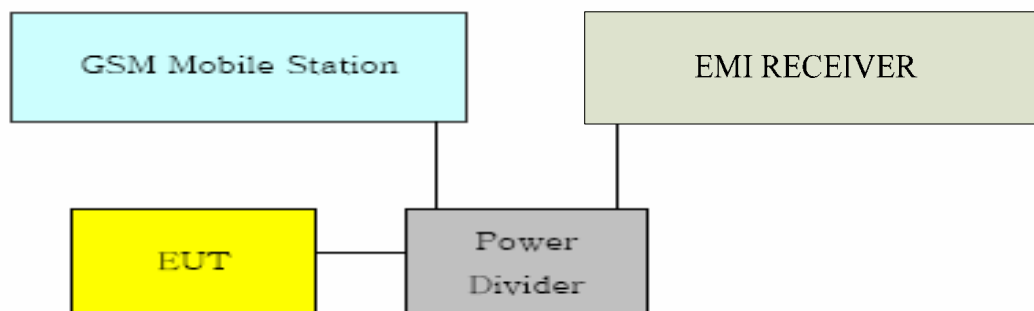

According to Part 24.238 (a), i.e., Out of band emissions. The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least  $43 + 10 \log(P)$  dB, so the limit level is:  
 $P(\text{dBm}) - (43 + 10 \log(P)) \text{ dB} = -13\text{dBm}$

#### Limits for Radiated spurious emissions(UE)

| Frequency range     | Limit Level /Resolution Bandwidth |
|---------------------|-----------------------------------|
| 30 MHz to 20000 MHz | -13dBm/1MHz                       |

#### Test Setup:

During the process of testing, the EUT was controlled via Wireless Communications Test Set to ensure max power transmission and proper modulation and measured by Rhode & Schwarz EMI test receiver (ESI26)

## Test Method

The measurement was performed accordance with section 2.2.13 of ANSI/TIA-603-B-2002: *Land Mobile FM or PM Communications Equipment Measurement and Performance Standards*.

The following steps outline the procedure used to measure the conducted emissions from the EUT.

1. Determine frequency range for measurements: From CFR 2.1057 the spectrum should be investigated from the lowest radio frequency generated in the equipment up to at least the 10th harmonic of the carrier frequency. For the equipment under test, this equates to a frequency range of 30 MHz to 19.1 GHz, data taken from 30 MHz to 20 GHz.
2. Determine EUT transmit frequencies: below outlines the band edge frequencies pertinent to conducted emissions testing.

Note: --

### Test Results for GSM mode:

#### Limit Level Construction:

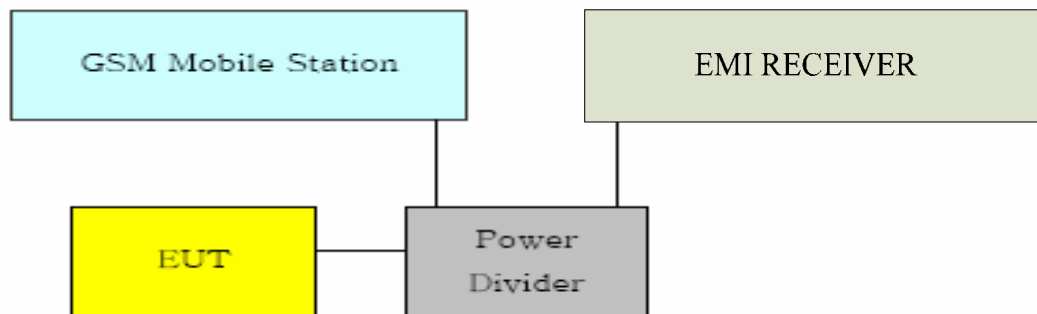

According to Part 24.238 (a), i.e., Out of band emissions. The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least  $43 + 10 \log(P)$  dB, so the limit level is:  
 $P(\text{dBm}) - (43 + 10 \log(P)) \text{ dB} = -13\text{dBm}$

#### Limits for Radiated spurious emissions(UE)

| Frequency range     | Limit Level /Resolution Bandwidth |
|---------------------|-----------------------------------|
| 30 MHz to 20000 MHz | -13dBm/1MHz                       |

#### Test Setup:

During the process of testing, the EUT was controlled via the Wireless Communications Test Set to ensure max power transmission and proper modulation and measured by Rhode & Schwarz EMI test receiver (ESI26).

## Test Method

- 1) The EUT was coupled to the EMI test receiver analyzer mode and the base station simulator through a power divider. The radio frequency load attached to the EUT antenna terminal was 50 Ohm. The loss of the cables the test system is calibrated to correct the readings.
- 2) The spectrum analyzer was set to Maxpeak Detector function and Maximum hold mode.
- 3) The resolution bandwidth of the spectrum analyzer was comparable to the emission bandwidth.

Note: --

## Test Results:

### GSM mode:

| Band-edge emission  |                 |             |
|---------------------|-----------------|-------------|
| EUT Channel         | Frequency [MHz] | Level [dBm] |
| 128 Left band edge  | 824.00160321    | -13.66      |
| 251 Right band edge | 849.00240481    | -14.94      |
| 512 Left band edge  | 1849.99760      | -16.05      |
| 810 Right band edge | 1910.00240      | -13.28      |

### GPRS mode:

| Band-edge emission  |                 |             |
|---------------------|-----------------|-------------|
| EUT Channel         | Frequency [MHz] | Level [dBm] |
| 128 Left band edge  | 824.00160321    | -13.66      |
| 251 Right band edge | 849.00240481    | -14.94      |
| 512 Left band edge  | 1850.00561      | -18.64      |
| 810 Right band edge | 1910.00641      | -17.25      |
